

Endocrinology

At Thomas Health, we are committed to designing a treatment plan that meets your individual health care needs. We specialize in the treatment and care of people living with all forms of diabetes, thyroid disorders, metabolic bone diseases (such as osteoporosis) and other problems involving the endocrine (or gland) system. Our endocrinologists are committed to providing patient-centered care, and we value not only our patients, but also our referring physicians as an integral part of our health care team.

Other common diseases and disorders managed by our endocrinologists include:

- Metabolic diseases
 - Menopause and its hormonal unbalances
 - Over- or underproduction of hormones
 - Osteoporosis and vitamin D deficiency
- Excessive growth or acromegaly/gigantism
 - Cancers of the endocrine glands
 - High blood pressure due to endocrine dysfunctions like adrenal gland tumors phechromocytoma
 - High blood cholesterol or lipid abnormalities associated with heart disease
