

Advanced Podiatry at Saint Francis

Patients who experience foot or ankle discomfort oftentimes experience situations when they are unable to live a fulfilling life. Advanced Podiatry at Saint Francis Hospital can help patients find the source of their problem, as well as a variety of potential solutions with a care plan that is personalized to individual needs, whether those needs are surgical or non-surgical. Personalizing the care of our patients enables us to diagnose and treat patients based on unique needs and preferences. As a convenience to our patients, we have available to our treatment plans the full array of diagnostic services available at Saint Francis Hospital.

We provide treatment for a full spectrum of conditions including, but not limited to:

Sprains
Fractures
Nerve pain
Ingrown toenails
Bunions
Callouses
Fallen arches
Heel spurs
Hammertoes

Heel and ankle pain
Arthritis-related issues
Diabetes-related issues
Wounds and ulcers
Ganglion Cysts
Gout
Warts
Athlete's foot and other skin conditions of the foot
Reconstructive foot and ankle surgery
