

Podiatry

Patients who experience foot or ankle discomfort oftentimes experience situations when they are unable to live a fulfilling life. We can help patients find the source of their problem, as well as a variety of potential solutions with a care plan that is personalized to individual needs, whether those needs are surgical or non-surgical. Personalizing the care of our patients enables us to diagnose and treat patients based on unique needs and preferences. As a convenience to our patients, we have available to our treatment plans the full array of diagnostic services available.

We provide treatment for a full spectrum of conditions including, but not limited to:

- | | |
|--|---------------------------------------|
| Ankle arthroscopy | Foot and ankle sprains |
| Ankle fusion | Ganglion cysts |
| Ankle instability | Gout |
| Ankle replacement | Hammertoe correction |
| Arthritis related issues | Heel and ankle pain |
| Athlete's Foot & skin conditions of the foot | Heel spurs |
| Bunion deformity | Ingrown toenails |
| Callouses | Ligament/Tendon repair |
| Diabetic Charcot reconstruction | Reconstructive foot and ankle surgery |
| Diabetes related issues | Nerve pain |
| Fallen arches | Sports medicine injuries |
| Foot and ankle fracture | Warts |
| | Wounds and ulcers |
