

Wound Care Clinic and Center for Hyperbaric Medicine

The Wound Care Clinic takes advantage of the newest clinical tools in wound healing along with traditional clinical practices.

Treatment includes regular visits for wound care, progress evaluations, and changes necessary to facilitate the healing process. Patients are also given instructions for wound care at home.

The care for your patient at the Wound Care Clinic will focus on a holistic approach to wound healing which may include:

- Nutritional assessment/Counseling
- Diabetic Education
- Patient and caregiver education
- Special needs for pressure relief
- Establishing home health wound care

Center for Hyperbaric Medicine

The Center for Hyperbaric Medicine is the only facility in West Virginia which is accessible 24 hours a day. At the Saint Francis Hospital Center for Hyperbaric Medicine, we will treat patients with wounds being treated by physicians other than those at our Wound Care Center. We also treat patients with other conditions, such as tissue damage from radiation. The center follows guidelines established by Undersea and Hyperbaric Medical Society and is affiliated with the Diver's Alert Network.
